

## Antron® carpet fibre – rated as having a lower environmental impact

In May 2005 all Antron® fibres produced at the INVISTA Oestringen facility (Germany) were awarded an environmental profile reference ENP 337 by BRE Certification Ltd.

BRE, as an independent third party, rated Antron® fibres as having a significantly lower environmental impact than the industry average.

ENP 337 shows that the overall environmental impact of producing Antron® fibre is 16% lower than the European fibre benchmark for similar products. In the largest impact category of primary energy usage for melting and extrusion of fibres, ENP 337 shows that Antron® fibre has a 30% lower impact than the benchmark for similar products.

## Antron® carpet fibre for residential and contract sectors

When you select the fibre, you determine the quality of your carpet.

Carpets made from Antron® fibre, a brand of fibre that has been tried and trusted for almost 40 years, keep their promise. Only carpets that meet our quality requirements bear the Antron® trademark.

# Antron® carpet fibre with Teflon® carpet protector

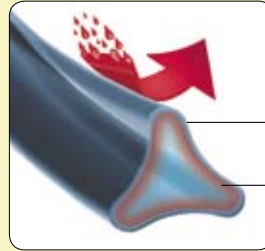

Antron® with DuPont™ Teflon® carpet protector is the brand name for an innovative stain and soil resist system especially designed for carpets made from Antron® fibres.

Antron® with Teflon® finishes markedly reduces the effort involved in cleaning a carpet helping it to keep its new look longer.

## Dual protective finish: Antron® with Teflon® carpet protector

An invisible barrier repels soil, dust and dirt and makes liquids run off in drops.  
A stainblocker gives permanent protection against stains.

Teflon® finishes form a dense yet sheer protective layer around each individual fibre. This invisible barrier repels soil, dust and dirt and makes liquids run off in drops.

An additional finish featuring what is known as stain-blocker offers permanent protection against stains. Even particularly persistent stains as caused by hot coffee, tea or red wine can be removed easily.

Coffee stain removed after 24 hours

## Tips for stain removal:

Remove solid soils and soak up liquids with clean, white cloth or kitchen roll. Always work from outside to inside.

Dab stain with a cloth or sponge and cold water. Do not rub!

Allow to dry thoroughly. Then vacuum-clean carpet to bring it back into shape.
