We selected
Zone from
Quadrant
Modular not
only because
of its BRE A
rating, also
because it
is easy to
maintain

- Some 3.500 m² of BRE 'A' rated Zone modular carpet has been used throughout lecture theatres, meeting rooms, breakout spaces, corridors and staircases of the building, designed by architect Stride Treglown. Suggested as a suitable carpet tile by the Department of Estates and Facilities, Goldsmiths University of London, the carpet had to meet the criteria necessary for the building to achieve its BREEAM 'Excellent' rating.

CASE STUDY:

Goldsmith University
London, UK

In the colourway of Gromit's Nose, the carpet tile also had to be durable and easy to maintain, qualities possessed by Antron® Lumena™ carpet fibre. This fibre is ideal for demanding public spaces. Thanks to the special features of polyamide 6.6, Antron® Lumena™ carpet fibre retains its original height without noticeable wear and tear or loss of structure and its hollow cross sections scatter the light making dirt and stains less visible. Solution dyed, where the colour is a permanent part of the fibre, Antron® Lumena™ fibre is also easy to maintain and where carpets are cleaned frequently, sometimes using harsh cleaning products, there is hardly any risk of fading or colour change.

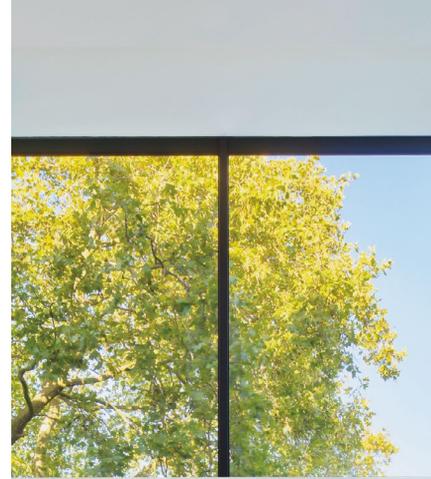

“With our aim of making sure the New Academic Building became BREEAM ‘Excellent’ rated, we had to consider the selection of our carpet carefully making sure that it would positively contribute to our goal, while also proving beneficial in long term use and complementing the interior scheme. We selected Zone from Quadrant Modular not only because of its BRE A rating,

but also because it met our needs in terms of being durable and easy to maintain.

Its design also helps to minimise the appearance of soiling and the colourway fits well with the building's interior scheme.”

Antron® Lumena™ carpet fibre, featured in Quadrant Modular's Zone has been used in the BREEAM 'Excellent' rated New Academic Building at Goldsmiths, University of London.

Quadrant Modular's Zone carpet tile features Colbond SMR, a 75% post consumer recycled content primary backing, and comes in 14 standard colourways ranging from grey through to browns, tans and reds.

→ *Antron® carpet fibres with hollow filaments minimize soil accumulation and make dirt harder to see. The hollow filaments refract and diffuse light and hide the dirt while the specially designed surfaces readily release the dirt, making cleaning easier.*
